

### Initial Treatment Calculator

In order to determine how much That Orange Stuff you will need for the **initial treatment**; (1) count the number of areas that you will need to treat. If you need a refresher on what these areas are, go back to the **identify the breeding ground section** of this site. Enter that number here: \_\_\_\_\_

(2) Multiply the number of areas by two, one treatment when you open and another when you close, and write that number here: \_\_\_\_\_

(3) Multiply the number from line (2) number by 16. Sixteen ounces of finished product are needed per treatment. Write that number here: \_\_\_\_\_

(4) Take the number from (3) and divide by 256. There are 256 16 oz. treatments that can be made from one gallon of concentrate. Write that number here: \_\_\_\_\_.

The number from section (4) is the number of gallons that you will need for the initial treatment.
